Summary

- * 7+ years of backend development, 5+ years frontend development, JavaScript / Node.js, Vue.js, HTML/CSS, Linux, Docker, AWS, and CI/CD tools. I can also use Python, PHP, Java, C#, and some Ruby,
- * Extensive experience developing, deploying, monitoring and scaling SaaS applications, building from zero and working with existing codebases, improving reliability to 99.99%.
- * Solid experience with testing and documentation.
- * Loves shipping software and supporting clients.

Experience

Software, Systems & Support Engineer

The Construct

Mar 2018 - Present (5 years 6 months)

- Manages the code base for the web application, adding features and fixing bugs, from the frontend to the backend and everything in-between.
- Ensures that all systems in the cloud (AWS) are up and running and performing optimally, achieving 99.99% uptime.
- Supports customers, leads the customer support team, and manages support documentation.

Software & Support Engineer

Self-employed

Jan 2017 - Mar 2018 (1 year 3 months)

- Built two exciting applications from scratch for two clients to solve their unique needs; a school management application and an automated street packing application. The latter also includes a mobile application, which is integrated into the parent app with a set of APIs. I picked up new tools on the fly in order to deliver these projects.
- Helped a client with feature addition, bug fixes, and general support for a C#-based Universal Windows Platform app, consequently making the app more robust and usable, reducing crashes by 100%.

Lead Mobile VAS Software & Support Engineer

Evolve Cosmos Allied Services (ECAS)

Feb 2016 - Dec 2016 (11 months)

- Led and delivered two key VAS integration projects (including the development of associated web applications) with mobile network operators and achieved 100% User Acceptance in record time.
- Refactored and improved the existing code base of current integrations, squashing several bugs and improving performance and reliability by more than 50%.
- Administered and maintained Linux servers and containers (Docker), adding new and improving current scripts to automate repetitive tasks, backup database, and free up space (among others).

- Provided outstanding support to customers and partners, winning their trust for timely and comprehensive solutions.

Education

Federal University of Technology Akure

Bachelor's Degree, Electrical/Electronic Engineering

2003 - 2008

Received honors degree Electrical/Electronic Engineering, majored in Computer engineering

Licenses & Certifications

Responsive Web Design - freeCodeCamp

Skills

Linux • MySQL • Docker • HTML • CSS • JavaScript • Python (Programming Language) • Git •
Node.js • Vue.js
